

### APPLICATIONS

AQUARIUMS

FISH TANKS

FISH FARMS

HATCHERIES

LIVE TRANSPORTATION

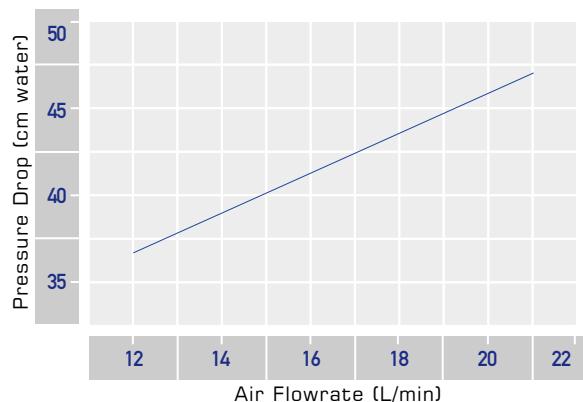

AQUI-S Air Diffusers are easy to install, simple to operate, and offer an effective solution to maintaining dissolved oxygen concentrations in both freshwater and seawater tanks. They are designed to operate with low pressure air pumps and blowers. They produce medium size bubbles that are effective for gas absorption by the water but do not irritate the gills of the fish, as can occur with fine bubble oxygen diffusers.

The silica material is proven to be sturdy, durable and allows for easy cleaning and low maintenance.

AQUI-S Air Diffusers are a cost effective solution to aeration and are available in a range of sizes.

### FLOW CHARACTERISTICS

### SPECIFICATIONS

MODEL	AQS 100
DIFFUSING AREA	385 cm <sup>2</sup>
OVERALL SIZE	27 cm x 5 cm dia.
WEIGHT	875 g
RECOMMENDED OPERATING RANGE	12 to 20 LPM Air
AIR INLET CONNECTION	13 mm Male Hose Connector
